Grenoble, May 23rd, 2023

Dear Vincenzo

As part of the collaboration between our teams, and my involvement as a member in the Doctorate in Molecular Medicine of the University of Siena, I'm happy to invite your PhD student Valentina Guardascione for a 6 months internship in my lab in the Grenoble Institute of Neurosciences, starting from September 1st, 2023.

She will be involved in molecular cloning and calcium imaging studies, for characterization of variants of unknown significant identified in the RYR1 gene during the molecular diagnosis of the patients. Hoping this internship will not only contribute to her technical formation, but also help the progress of this research program and open her mind to the international aspect of research and of collaborative projects.

Looking forward for welcoming Valentina,
Sincerely

Isabelle Marty, PhD, Inserm Research Director
Team Leader
